

## Please read carefully before the beginning of the contest !

### Position of Winches and Turn-arounds.

- The positions of the winches are drawn lots and are registered at the competitor-table.
- Position numbers of both winches and turn-arounds are marked at the respective lines. The pulley has to be placed at the same number on the pulley line as the winch on the winch line.

### Preparation time:

- The preparation time of 5 minutes will be announced officially only for the first group of competitors to each task.
- The following groups of competitors will be called for in due time.
- During preparation time operation of the transmitter is not allowed.

### Distance task:

- Working time: 7 minutes !
- Signal identification during take-off. Immediately before starting the pilot or his helper must distinctly call the signal which had been allotted to him, e.g. "Alpha is starting".
- The starting position controller coordinates the different competitors and passes the model identification on to the lines A and B during starting operation.
- Please do start in staggered arrangement !!
- Restarts must be announced clearly.

### Speed task

- Working time: 3 minutes !
- The speed task must be flown in an interlocked sequence, i.e. the pilot receives the release of working time upon the fly away signal of the previous pilot at line A.
- For safety reasons the landing must be performed outside of the speed flight area.

### Duration task

- Working time 12 minutes including flying time 10 minutes.
- We aim at flying the duration task also in an interlocked sequence. The next duration task group starts approx 9 minutes after the previous group has started.
- For the evaluation of the competitor the readings taken by the personal helper will be referred to. After the landing the competitors will pass on their flying und landing results to the recorder to have them registered. The duration task controllers will keep the time of any competitor at random and compare it to the time the pilot's helper has entered at the recorder's register and they review the right readings of the landing. **Deviations of more than three seconds in favour of the competitors will be imposed with 100 penalties.**
